

INDUSTRIAL VACUUM SOLUTIONS

Your needs built in

The benefits of using a Nilfisk Industrial Vacuum Solution

Situation

Oven cleaning

Packaging

Manufacturing

Production line

Overhead cleaning

Liquid recovery

Conveyors

Risk

Scraps and trims from production must be recovered, which can halt the packaging process.

Scraps and trims produced during recovery means the packaging process has to be recovered

Dust and waste in the production areas pose a safety risk and slows down processes

Production contamination can lead to sickness, lawsuits, and can tarnish your reputation

Deposits of dust and waste on high surfaces can cause contamination and introduce allergens into the facility

Spills of liquids are an accident waiting to happen. Keep your staff safe by recovering liquids. Our vacuums can remove liquids and also separate any solids present for potential reuse

Products handled improperly or damaged in transport

Advantages & solutions

Avoid product contamination

Use one of our industrial vacuum cleaners with a Nomex filter

Avoid machinery downtime

Continuous recovery of scraps from packaging machine

Ensure the highest level of safety by using ATEX

Use ATEX explosion proof vacuum cleaners on manufacturing lines with quick and easy access

Removal of contaminants

Assures product quality and increases efficiency

Avoid dust dispersion

Special overhead kits reach even the highest surfaces

Keep your staff safe and recover liquids

Liquids can be collected and vastly discharged, if solid waste is present, it is separated from the liquids and is then collected in a specific basket

Efficiently transport powders, granules, or other materials

With pneumatic conveyors to ensure quality.
